

I fully support the Comment submitted by the The American Radio Relay League concerning Docket ET 03-104. I have concluded that the comments made by the proponents of Broadband over Power Line (BPL) have little if any credible scientific data to support approval of this docket at this time. I believe that further research and innovations in BPL technology are necessary to avoid the major risk that this technology will not cause irreparable interference to the services licensed to operate in the 2 MHz - 80 MHz frequency range. Approval of ET 03-104 would violate the existing FCC rules on non-interference and would be contrary to the best interest of the public.
